

With this proposal we try to raise awareness about the importance and need of the different natural reserves around the world, that contribute to the preservation of endangered species, whilst also protecting certain climatic areas and ecosystems, ensuring the optimal ambience for the development and breeding of these species. With this, natural reserves and associated entities take part in the conservation of worldwide biodiversity, both to flora and fauna.

Final Evaluation will correspond to the last activity: The Ecosystem Mockup. This is a group activity, so therefore all integrants of the group will have the same mark.

As it is a final activity that integrates all knowledge acquired throughout the didactic proposal , it will have greater weight on the final mark of each student than the rest of the activities. This weight will be 40% of the final mark, and will be the only recoverable item in case of a failed mark.

Different aspects will be assessed: originality, use of materials, integration of knowledge, clearance...
